REMARKS

This Amendment is submitted prior to examination of the above-identified application. Claims 1-27 are pending in the application. In this Amendment, claims 32 and 37 have been canceled, and claims 28 and 33 have been amended.

Claims 28-31 and 33-36 thus remain for consideration.

If any issues remain, or if the Examiner has any further suggestions, he/she is invited to call the undersigned at the telephone number provided below.

The Examiner is hereby authorized to charge any insufficient fees or credit any overpayment associated with the above-identified application to Deposit Account No. 50-0320.

The Examiner's consideration of this matter is gratefully acknowledged.

Respectfully submitted,

Bruno Polito

VERSION WITH MARKINGS TO SHOW CHANGES MADE

--28 (amended). A method for reproducing information representative of signals recorded on a recording medium, [said information including at least one image data that is derived from a moving image signal,] wherein said recording medium is accommodated within a recording medium cartridge that includes a memory device separate from said recording medium, the method comprising the steps of:

loading said recording medium cartridge into a [recording and] reproducing apparatus [that is operatively connected to a display device];

transmitting at least some of said information from said memory device included in said recording medium cartridge to said [display device] reproducing apparatus; and

[displaying at least some of said transmitted information on said display device including displaying said at least one image]

reproducing said signals in accordance with the transmitted information;

wherein said transmitted information includes data identifying at least two of said signals recorded on said recording medium and specifies a predetermined order for said identified signals, said predetermined order being different from the order in which said signals are recorded on said recording medium.--

--33(amended). A method for reproducing information representative of signals recorded on a recording medium, [said information including at least one image data that is derived from a moving image signal,] said recording medium being accommodated within a recording medium cartridge that includes a memory device separate from said recording medium, wherein said information is stored in said memory device in the form of a plurality of data packets, the size and format of said data packets having been determined prior to the storing of said information in said memory device, and wherein said information is organized according to a hierarchical structure, the hierarchical structure including at least two levels [and being capable of accommodating more than two levels], the method comprising the steps of:

loading said recording medium cartridge into a [recording and] reproducing apparatus [that is operatively connected to a display device];

transmitting at least some of said information from said memory device included in said recording medium cartridge to said [display device] reproducing apparatus; and

[displaying at least some of said transmitted information on said display device including displaying said at least one image]

reproducing said signals in accordance with the transmitted information;

wherein said transmitted information includes data identifying at least two of said signals recorded on said recording medium and specifies a predetermined order for said identified signals, said predetermined order being different from the order in which said signals are recorded on said recording medium.--
